Student and Instructor Desks:

Core to the design of the Student and Instructor Lab Tables is the requirement to support 2-22" LCD flat panels, in a dual-display configuration that can be raised and lowered by way of an electric-actuator lift mechanism, controlled by the Instructor. This feature gives the Instructor a tool to help manage the pace of the class and control student attention between presentation, demonstration, and practice sessions associated with the training program.

Tele-presence Tables:

Balancing form and functionality; the Tele-presence Tables are designed to complement the architectural design of the Executive Meeting spaces while providing robust technical connectivity and configuration flexibility.

Adaptaspace provides a modular table system which support 3, 6, 14 and 22 person meeting scenarios. When assembled in the full 22-Person configuration – the table forms a true ellipse, with the center area open to the floor.

Height Adjustable Lectern:

The Lectern is mounted on casters for mobility, and features electrically activated height adjustment to suit individual presenter preferences.
